

Helping Save Energy

Old Mill Thin Brick System

Not only is the Old Mill Thin Brick System one of the greatest exterior systems to hit the market, it is also one of the most energy efficient. The Old Mill Thin Brick System provides home owners, and architects, with an R-7 insulation value. It's a great new choice to save energy.

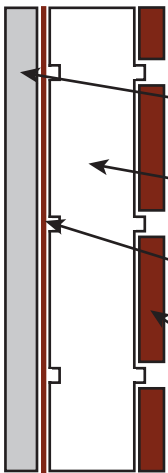

Introducing the Old Mill Thin Brick System.
A great new choice for building energy efficient structures.

R-7

The standard Old Mill Brick System provides an R-7 insulation value. There are also other panel options which will increase R values as high as R-28.

• Sound Substrate helps the Old Mill system last longer and work more effectively throughout the years.

• Old Mill Panel offers unsurpassed insulation values and efficiencies.

• Old Mill moisture barrier seals cracks which prevents moisture and air from seeping in while hot and cold are kept from escaping.

• Thin Brick is the first defense against the elements. Its initial protection allows the rest of the system to function above standard levels.

Save on average more than 20% in heating and cooling costs each year.
